Portfolio

Education

Heritage Institute of Technology, Kolkata

Oct 2022 – Jun 2026

B.Tech in Computer Science and Engineering, Data Science | CGPA: 8.50/10

Kolkata, India

Experience

Cognizant

Jan 2026 – Apr 2026

AIA Azure Intern

Chennai, India

- Built an end-to-end Azure Data Factory pipeline using Medallion Architecture to process JSON, CSV, and XML data across Azure Data Lake Storage Gen2 and Azure SQL Database.
- Developed Mapping Data Flows and SQL stored procedures for data cleansing, validation, SCD Type 2 historization, and fact table loading for downstream analytics.

CollegeTips

Jun 2025 – Jul 2025

Data Analyst Intern

Remote

- Cleaned and structured 15+ datasets for analysis, reducing data preparation and analysis time by approximately 30%.
- Built 10+ dashboards and visualizations to track campaign performance and reduce campaign planning time by approximately 25%.

Jadavpur University

Jun 2024 – Oct 2024

Machine Learning Intern

Kolkata, India

- Developed XGBoost classifiers for three binary Alzheimer's disease stage classification tasks using MRI-derived features from 367 ADNI scans.
- Applied z-test based feature selection and achieved maximum accuracies of 94.58% for HC vs EMCI, 85.97% for EMCI vs LMCI, and 86.60% for LMCI vs AD.

Projects

JobShield | *Python, Streamlit, Groq, GPT-OSS, PyPDF, python-docx* | GitHub

- Built a Streamlit application that parses PDF and DOCX resumes, cleans extracted text, analyzes job safety signals, and compares resumes with job descriptions.
- Implemented a two-stage LLM workflow using GPT-OSS 20B for risk signal analysis and GPT-OSS 120B for evidence-based resume-to-job reasoning, with a confirmation gate for high-risk results.

Exam Seating System | *React, Flask, SQLite, Gemini, OpenPyXL* | GitHub

- Built a final-year project to automate exam seating and invigilator assignment for a college workflow using a constraint-based web application.
- Implemented a multi-phase seating algorithm with department constraints, invigilator load balancing, double-booking prevention, conflict handling, and Excel report generation.
- Integrated Gemini to convert natural-language seating constraints into structured rules and added JWT-based role access for administrative operations.

StockSense | *Python, XGBoost, Pandas, Streamlit, Time Series* | GitHub

- Developed an SKU-level demand forecasting pipeline that transforms transaction data into daily demand patterns and uses time-based features for forecasting.
- Compared chronological forecasting baselines with an XGBoost model and connected predictions to reorder points, safety stock, and inventory-risk actions in a Streamlit application.

Certifications

HackerRank SQL (Intermediate)

Azure Data Factory — Data Engineering on Azure and Fabric

Apache Spark 3 for Data Engineering & Analytics with Python

Technical Skills

Programming: Python, SQL, R, PySpark

Machine Learning: Scikit-learn, XGBoost, Pandas, NumPy, Feature Engineering, Cross-Validation

GenAI and NLP: LLMs, RAG, LangChain, LangGraph, Groq, Hugging Face, Gemini

Data and Cloud: Azure Data Factory, Azure Data Lake Storage Gen2, Azure SQL, AWS, Power BI, Excel

Development: Flask, Streamlit, React, REST APIs, SQLite, PostgreSQL, MySQL, Git
